

BARBED WIRE

The product

Barbed wire or artificial bramble (due to its resemblance to natural bramble) is ideal to set boundaries and secure agricultural and livestock farms.

It's also used to reinforce safety of sensitive areas, like industrial and military sites or prisons.

Thanks to its regularly spaced spikes, barbed wire is a reliable fence that acts as a deterrent to provide security.

SBFM's advice : for optimal protection, we recommend installing a row every 50 cm.

Characteristics

- Wires diameter : 1,7 / 2,0 / 2,7
- Finish : heavy galvanised
Zincalu finish available
Two types of steel : mild steel or hard steel
- 4 peaks per buckle
- 1 spike every 10 cm

MOTTO-type buckle

Buckle wrapped around the cord

IOWA-type buckle

Buckle intertwined around the cord
