

FENCE WITH DETECTION SYSTEM

The product

Fence with detection system is ideal for protecting sensitive sites against vandalism and burglary.

Making intrusion impossible, this fence is generally used for industrial sites, car dealerships, waste disposal sites, parking lots and logistics areas.

This system, consisting of posts and a mesh of parallel wires, can be installed as a complete system or on an existing fence. It detects any shearing, cutting or climbing that may occur.

Fence with detection system can be programmed in low-voltage detection-only mode or in low- and high-voltage detection and repulsion mode. It's powered by an alarm system that monitors its operation via a telephone transmitter.

Characteristics

- 3 functions : dissuasive, repulsive, detector
- Height : 2,50 or 3 m
- Length of detection zone with one electrical box : 350 m. Depending on the linear perimeter, several boxes can be installed.
- Posts screwed onto existing fence or sealed onto other supports
- Voltage delivered : 8000V pulses along the entire perimeter
- Complies with NF EN 60335-2-76 standard for high voltage
