

HEAVY WELDED WIRE

The product

Heavy welded wire is a barrier to prevent animals from crossing sensitive areas such as roads. It's also the standard fencing for hunting zones.

Highly resistant to shocks and impacts, this fence is welded at the intersections for greater durability. The double notching of horizontal wires ensures the tension of the fence and the evacuation of water.

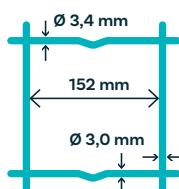

With its mesh size decreasing from top to bottom, it prevents animals from crossing over long distances.

Available in "hunting" version, 2 m above ground, 2,50 m including 50 cm buried to prevent game from passing through.

SBFM's advice : leave a gap between posts of at least 3 m and no more than 4 m.

Characteristics

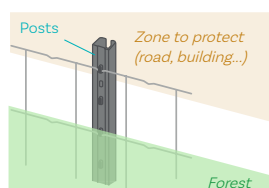

- Finish : zincalu
- Degressive mesh, tightened at the bottom to prevent animals from passing through
- Uniform vertical wire spacing
- Packaged in 50 lm rolls
- Impact resistance ≥ 2 tons

REF.	HEIGHT (m)	NB. OF HORIZONTAL WIRES	MESH WIDTH (cm)	WIRE DIAMETER (mm)	WEIGHT (kg)	LENGTH (lm)
44055	1,40	12	15	Edge wires : 3,4	60	50
440581	1,80**	14	15		74	
44060	2,00	15	15		80	
440625	2,25**	16	15	Other wires : 3,0	92	
44063	2,45	17	15		93	
44064*	2,50	20	15		103	

*Product incompatible with highway posts with a pitch of 10,16 cm when installed 2,50 m above ground (without burying it).

**Upon request

Installation advice : to increase the strength of the fence, the posts are installed inside the area to be protected.
